

Lycene butterfly valves - DN 32/40 up to 300 mm lycène

Summary

• Sale leaflet	p.2
• Spare parts list	p.3
• Overall dimensions	p.4
• Top connections for actuations	p.5
• Actuations	p.6
• Connecting flanges	p.7
• Normalisation	p.8
• Pressure/temperature	p.9
• Torque value	p.9
• Tag/Traceability	p.9
• Flow rate (Kv)	p.10
• Head loss diagram	p.11
• Type of flange	p.12
• Bolts	p.13
• Installation	p.14

Applications and main characteristics

For chemical media, food processing industries and pure water

Applications :

- High corrosion : toxic and highly corrosive fluids which do not allow the use of metallic materials and/or elastomer, and which require the exclusive use of PFA.
- Moderate corrosion : fluids moderately corrosive which require the use of a PFA liner combined with a stainless steel closing system.
- Fluids which require a high level of working safety : food , painting, etc.

Main characteristics :

- Available in wafer type and lug type
- Two parts body in cast iron GJS1025
- Vertical and horizontal operating position.
- Disc : 316L stainless steel or PFA coated (2,5 mm thick) and PTFE liner (thickness 3 mm).
- Tightness at shaft location with bearing and spring.
- Option : heat-insulation
- Anti-ejection system of the shaft (even in case of removing of the actuation)
- Anti-static protection device
- Downstream removing and mounting at end of the line for lug type version.
- Body : Epoxy coated 80 µm, colour blue RAL 5017.
- According to the PED Directive 97/23/CE (Pressure Equipment Directive) and the ATEX Directive 94/9/CE (see page 8)
- Optional : grease-and-silicone-free Lycene, mounted in white room ISO 6 class according to the norm ISO 14644-1 : Please ask our technical department.

An instruction notice specifying the installation characteristics and the commission of the Lycene is added to every product ; It is available on our web site www.socla.com or on request by our sales department.

Sale leaflet

By concentrating the technologies and by integrating technical solutions of the highest levels, **Socla** fulfils its ambition :

- competitiveness of a standard range,
- reliability,
- comprehensive range thanks to a multiplicity of solutions.

- Safety anti-ejection circlip keeps shaft in place and allows easy maintenance
- Safety reinforced by a secondary water tightness
- An reliable anti-static device, tress in contact between shaft and body, and outside tress for fixation on flanges

- Very high level of working safety for chemical and food fluids, and high purity process thanks to quality components :
 - PTFE liner (3 mm thick)
 - 316L stainless steel disc and PFA coated discs in stainless steel 316L (2,5 mm thick)
- Liner back-up enclosed in the body ensures perfect disc tightness

- PFA coated disc version : protection reinforced by a PFA coated stem when tightness is required
- Tightness at shaft location with bearing and spring

- Identification and traceability ensured by riveted metal tag : see page 9.

Attention : the Sylax lug type body is not a multi-connection body (connection to many flanges of different sizes). Generally, every connection relates to a different reference of finished products.

• End of line mounting and downstream removing

The end of line mounting and the downstream removing, at ambient temperature, of the Lycene butterfly valve is limited to the pressure mentioned on page 5 (pressure/temperature/vacuum) according to the PED directive 97/23/CE.

These mountings are only possible on tapped lugs bodies.

Normalisation

- **Design :**
According to EN 593 and marking according to EN 19.
- **ISO top connection:**
ISO top connection according to EN ISO 5211
- **Face to face :**
According to EN 558-1 series 20
ISO 5752 series 20
API 609 table 1
- **Connecting flange :** (see page 6)
According to EN 1092-1 and EN 1092-2
ASME/ANSI B16.5 Class 150
BS10 Table D and Table E
JIS B 2238 et JIS B 2239
- **Tests :**
According to EN12266-1
 - tightness of the body (directive PED 97/23/CE) : Test P11 (1,5 x permissible operating pressure)
 - tightness of the seat : test P12 rate A (1,1 x permissible operating pressure).
 According to EN12266-2
 - anti-static device : test F21

- **European Directives :**

Our butterfly valves are in accordance to the safety requirements of the following directives.

Directive 97/23/CE : Equipments under pressure PED (Pressure Equipment Directive)

Applies to the design, manufacturing and the assessment of the conformity of pressure equipment, the maximum allowable pressure of which is 0,5 bar.

Pressure equipment for water supply, distribution, and disposal of water is excluded.

Depending on the type of pressure equipment, maximum allowable temperature (PS), DN, physical nature of the fluid (liquid, gas or vapour) and the degree of danger of the fluid (group1/2)*, the directive classifies this same equipment into different categories (article 3.3, I, II, III, IV), required for the assessment of conformity with CE marking.

The equipment defined in article 3.3 of the directive must not bear the CE marking.

(*) Group 1 : hazardous fluids (directive 67/548/EEC) / explosive / highly flammable / easily flammable / flammable / very toxic / toxic / combustion agents.

Group 2 : all other fluids

Important notice : the indicated pressure for the different categories of fluids (L1/L2/G1/G2) is under no condition a guarantee of use.

Therefore, it is essential to validate the use of products under given operating conditions. Socla is not responsible for modifications of the products to working conditions not previously specified by the customer.

In order to facilitate your choice regarding these new regulatory requirements, Socla has put the necessary information

concerning products with CE marking, specification sheets and product identification plates at your disposal in the price list (+ see additional explanations on the detachable slip).

In addition, the operating instructions are available on our web site www.socla.com or by simple request from our sales department.

Directive 94/9/CE : ATEX (EXplosive ATmospheres)

This directive is only applicable for the following atmospheric conditions : $-20^{\circ}\text{C} < T < +60^{\circ}\text{C}$; $0,8 \text{ bar} \leq P \leq 1,2 \text{ bar}$.

In this risk analysis, the fluid which passes through the valve is not taken into account. It is under the responsibility of the user to take into consideration the risks generated by the fluid like : heating of the surface of the valve, internal chocks generated by granulates, wave of chocks due to the installation (water hammering), or the risks due to foreign bodies which are inside the installation.

Classification of the bare shaft valve :

The marking of the bare shaft valve is :  II 2 DG.

Classification of the set valve + actuation :

- Valve with a hand lever :

The use of hand levers produced by Socla within a ATEX area do not represent additional risks. The valve with a hand lever is in conformity to the marking :  II 2 DG.

- Valve with other actuations :

The classification of the valve + actuation supplied by Socla is similar to the lowest classification of the components which composed the assembly.

No additional marking will be used to indicate the classification of the assembly.

If a single element of the combination does not carry the ATEX mark, then the entire valve/control combination does not conform to the ATEX directive

The classification of the equipment allows its use in a determinate area; an use in another area is under the responsibility of the user.

Machinery Directive 2006/42/CE : Machinery Directive

In its Appendix I it sets a certain number of Essential Health and Safety Requirements which must be met. It applies to motorised butterfly valves, (with electric, pneumatic or hydraulic actuators). According to this Directive, these sets are "Partly Completed Machineries" designed for being integrated into a machine.

"Partly Completed Machinery" means an assembly which is almost machinery but which cannot in itself perform a specific application. A drive system is partly completed machinery. Partly completed machinery is only intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment, thereby forming machinery to which this Directive applies.

An instruction notice specifying the installation characteristics and the commission of the Lycene is added to every product; It is available on our web site www.socla.com or on request by our sales department.

Pressure

DIRECTIVE 97/23/CE Equipments under pressure

Products manufactured in conformity with the requirements of the directive, according to pressure, DN and fluid (see on the precedent page).

ATTENTION
Gas G1 and G2 : The max. pressure is 6 bar when using cast iron GGG25 bodies (FGL 250)

LINERS	DN mm	Cat.	MOUNTING	PFA	PS

Technical manual **Lycene**

Flow rate (Kv)

The butterfly valve is not the best product for regulating Nevertheless, the Sylax butterfly valve can be used to regulate by an opening stage between 30° and 90°. A regulation in the opening stage lower than 30° is not advisable because of over speed, cavitation effect, which could damage prematurely the valve.

The maximum flow velocity of the fluid through the valve must not exceed :

- 3 m/s for liquid fluids. Between 3 and 5m/s, the use of the Lycene butterfly valve is possible, but the phenomena of cavitation, noise, vibration and water hammering increase.
- 20m/s for gas. Between 20 and 25m/s, the use of the Lycene butterfly valve is possible, but the phenomena of cavitation, noise, vibration and water hammering increase.
- 2 m/s for DN 900 to 1200
- for gas and semi-solid or paste fluids : please consult us.

In process

Type of flange

The butterfly valve has been designed to be mounted on standard flanges. Only standard flanges type 11, 21 and 34 according to EN 1092 are quite compatible.

For other type of flanges, refer to the table below. Nevertheless, only approved connections will be covered by our guarantee.

DN	Ø A0	Ø A1 mini	Ø A2 maxi	Ø B mini
32/40	40	33	48	88
50	50	36	58	102
65	65	54	73	122
80	80	73	88	138

* WAFER TYPE BODY :

Assembly by rods : Number of nuts = 2 x Number of rods (above)

Assembly by bolts : Number of nuts = Number of screws (above)

LUG TYPE BODY :

Assembly by screws : Number of screws per face (above)

For other dimensions, please consult corresponding norms and use the table below.

(1) For steel flanges type 11 according to EN1092-1

For wafer type bodies ; assembly by rods :

L1 = a + 2(b+c)

L1 = minimum length of rods

a = width of the butterfly valve

b = thickness of the flange (customer)

c = thickness of the washer + thickness of the nut + exceeding length of the rod

For wafer type ; assembly by bolts :

L2 = a + 2b + c + j

L2 = mini length of screws under head

a = width of the butterfly valve

b = thickness of the flange (customer)

c = thickness of the washer + thickness of the nut + exceeding length of the rod

j = thickness of the washer

For lug type ; assembly by screws :

L3 ≤ b + e + j avec L4 ≥ L3 - (b + j)

L3 = maximum length under head of screws

L4 = minimum length of the threading of the screws

a = width of the butterfly valve

b = thickness of the flange (customer)

e = maxi depth of screws

j = thickness of the washer

Installation**• General remarks :**

For safety reasons, the installation must take place under the supervision of authorised people taking account of local safety instructions and advice.

The handling of butterfly valves and their controls must be done by staff trained in all technical aspects of their operation.

Before installation the pipes must be depressurised and purged (empty of its fluid) in order to avoid any danger to the operator.

The pipe work must be correctly aligned so that no extra stress is exerted on the valve casing.

In ATEX zone, check that the pipes are connected to the earth. Do not use insulating pipes (PVC....)

Check the compatibility of the connection flanges against the operating pressure : the PN number of the flanges must be greater or equal to the operating pressure.

The valve is a machined piece of equipment and must not be used to prise apart the flanges.

An **instruction notice** specifying the installation characteristics and the commission of the Lycene is added to every product. It is available on our web site www.socla.com or on request by our sales department.

• Installation conditions :

It is recommended that the distances mentioned below be respected in order to prolong the life time of the valve.

Mounting the valve close to pipe work junctions places it in turbulent zones which increase its wear.
